Experience

WIDETECH (PTY) LTD
Durban Central, Durban

Frontend Software Developer
March. 2020 – Jan 2022

- Worked on the Fronted using, JavaScript, Liquid, HTML, CSS
- Used Figma, Adobe Photoshop and Inkscape for the UI/UX design
- Integrated Google analytics console and the Facebook pixel tool, Hotjar for marketing purposes.

FREELANCING
Durban Central, Durban

Web Developer, Web UI/UX Designer
June. 2018 – March 2020

- Worked with clients from all over the world on Upwork, working with HTML, CSS, and JavaScript to create basic website template.
- Did a lot of WordPress website gigs for small local business owners

My Projects

Natours Web Application
TOUR BOOKING WEB APP

- Designed the RestAPI Using Express, Mongodb Database and tested it using Postman.
- Implemented the authentication and authorization for user sign up and user login.
- Used the MVC software architecture to separate the code into different file modules for fast and robust build.
- Did data modelling in MongoDB, created the data Schemas and stored the data.
- The whole web app is a server side rendered application, used PUG (Backend template Engine) for front-end templates with JavaScript handling the front-end.
- Implemented Stripe to process payments.

- I deployed the web application in Heroku

Forkify Web App
WEB APP THAT OFFERS VARIOUS FOOD RECIPES

- Accessed the recipe data from the 3rd part API.
- Consumed the API to build the front-end using Pure JavaScript.
- Used the MVP software architecture to build an app much faster and robust.

- Implemented JavaScript modules, NPM dependencies, third party libraries, Asynchronous functionality.

- Used local storage to bookmark recipes.

- I deployed the application in Netlify

Weather App

WEB APP TO GET TODAY'S AND WEEKLY WEATHER FORECAST IN YOUR CITY

• Powered the app with the third part weather API for the weather forecast data
• Designed the UI/UX using Figma and adobe photoshop.
• Consumed the API to build the front-end using Pure JavaScript.
• Used the MVC software architecture to build an app much faster and robust.
• Implemented JavaScript modules, NPM dependencies, third party libraries, Asynchronous functionality.

• I deployed the application on Netlify
